A5: Relational Schema, validation and schema refinement

This artifact contains the Relational Schema obtained by mapping from the Conceptual Data Model.

1 Relation Schema

Relation schemas are specified in the following compact notation, where UK means UNIQUE KEY and NN means NOT NULL.

R01	admin(id, username NN UK, email NN UK, hashed_pass NN)
R02	answer(id, date NN, message NN, question_id → question NN, user_id → user NN, auction_id → auction NN)
R03	answer_report(id, date NN, message NN, answer_id → answer NN)
R04	auction(id, start_bid NN, curr_bid NN, start_date NN, end_date NN, date NN, type NN, user_id → user NN, product_id → product NN)
R05	auction_report(id, date NN, message NN, auction_id → auction NN)
R06	bid(id, amount NN, date NN, user_id → user NN, auction_id → auction NN)
R07	city(id, name NN UK, country_id → country NN)
R08	country(id, name NN UK)
R09	follow(user_followed_id → user, user_following_id → user, date NN)
R10	image(id, filename NN UK, product_id → product NN)
R11	location(id, address NN, city_id → city NN)
R12	notification(id, message NN, type, user_id → user NN, isNew NN)
R13	product(id, name NN, description NN, type NN)
R14	question(id, date NN, message NN, title NN, user_id → user NN, auction_id → auction NN)
R15	question_report(id, date NN, message NN, question_id → question NN)
R16	review(id, rating NN, message NN, date NN, bid_id → bid NN)
R17	review_report(id, date NN, message NN, review_id → review NN)
R18	user(id, username NN UK, email NN UK, name NN, short_bio NN, full_bio, hashed_pass NN, phone, register_date NN, profile_pic, location_id → location)
R19	user_report(id, date NN, message NN, user_id → user NN)
R20	watchlist(auction_id → auction, user_id → user, notifications NN, date NN)

Table 1: Relation Schemas.

D01	auction_type	ENUM('Default', 'Dutch', 'Sealed Bid')
D02	notification_type	ENUM('Auction', 'Question', 'Answer', 'Win', 'Warning')
D03	category_type	ENUM('Art', 'Tickets and Trips', 'Dolls and Bears', 'Toys and Hobbies', 'Cars and Vehicles', 'Sports Souvenirs', 'Home and Garden', 'Collectibles', 'Electronics and Computers', 'Movies and DVDs', 'Musical Instruments', 'Jewelry', 'Books', 'Cloths and Accessories', 'Health and Beauty', 'Video Games', 'Sexual Toys')

Table 2: Additional Domains.

2 Functional Dependencies and Normalization

For the relational model presented above, consider the following non-trivial functional dependencies for each table.

Table R01 admin	
Keys: {id}, {username}, {email}	
Functional Dependencies	
DF0101	id → username, email, hashed_pass
DF0102	username → id, email, hashed_pass
DF0103	email → username, id, hashed_pass
NORMAL FORM	BCNF

Table R02 answer	
Keys: {id}	
Functional Dependencies	
DF0201	id → date, message, question_id, user_id, auction_id
NORMAL FORM	BCNF

Table R03 answer_report	
Keys: {id}	
Functional Dependencies	
DF0301	id → date, message, answer_id
NORMAL FORM	BCNF

Table R04 auction	
Keys: {id}	
Functional Dependencies	
DF0401	id → start_bid, curr_bid, start_date, end_date, date, type, user_id, product_id
NORMAL FORM	BCNF

Table R05 auction_report	
Keys: {id}	
Functional Dependencies	
DF0501	id → date, message, auction_id
NORMAL FORM	BCNF

Table R06 bid	
Keys: {id}	
Functional Dependencies	
DF0601	id → amount, date, user_id, auction_id
NORMAL FORM	BCNF

Table R07 city	
Keys: {id}, {name}	
Functional Dependencies	
DF0701	id → name, country_id
DF0702	name →id, country_id
NORMAL FORM	BCNF

Table R08 country
Keys: {id}, {name}

Functional Dependencies	
DF0801	id → name
DF0802	name → id
NORMAL FORM	BCNF

Table R09 follow	
Keys: {user_followed_id, user_following_id}	
Functional Dependencies	
DF0901	user_followed_id, user_following_id → date
NORMAL FORM	BCNF

Table R10 image	
Keys: {id}	
Functional Dependencies	
DF1001	id → filename, product_id
NORMAL FORM	BCNF

Table R11 location	
Keys: {id}	
Functional Dependencies	
DF1101	id → address, city_id
NORMAL FORM	BCNF

Table R12 notification	
Keys: {id}	
Functional Dependencies	
DF1201	id → message, type, user_id, isNew
NORMAL FORM	BCNF

Table R13 product	
Keys: {id}	
Functional Dependencies	
DF1301	id → name, description, type
NORMAL FORM	BCNF

Table R14 question	
Keys: {id}	
Functional Dependencies	
DF1401	id → date, message, title, user_id, auction_id
NORMAL FORM	BCNF

Table R15 question_report	
Keys: {id}	
Functional Dependencies	
DF1501	id → date, message, question_id
NORMAL FORM	BCNF

Table R16 review	
Keys: {id}	
Functional Dependencies	
DF1601	id → rating, message, date, bid_id
NORMAL FORM	BCNF

Table R17 review_report
Keys: {id}

Functional Dependencies	
DF1701	id → date, message, review_id
NORMAL FORM	BCNF

Table R18 user	
Keys: {id}, {username}, {email}	
Functional Dependencies	
DF1801	id → username, email, name, short_bio, full_bio, hashed_pass, phone, register_date, profile_pic, location_id
DF1802	username → id, email, name, short_bio, full_bio, hashed_pass, phone, register_date, profile_pic, location_id
DF1803	email → username, id, name, short_bio, full_bio, hashed_pass, phone, register_date, profile_pic, location_id
NORMAL FORM	BCNF

Table R19 user_report	
Keys: {id}	
Functional Dependencies	
DF1901	id → date, message, user_id
NORMAL FORM	BCNF

Table R20 watchlist	
Keys: {auction_id, user_id}	
Functional Dependencies	
DF2001	auction_id, user_id → notifications, date
NORMAL FORM	BCNF

A relational schema R is considered to be in ***Boyce–Codd* normal form (BCNF)** if, for every one of its dependencies X → Y, one of the following conditions holds true:

- X → Y is a trivial functional dependency (i.e., Y is a subset of X)
- X is a superkey for schema R

By the analysis of the functional dependencies, it is confirmed that all the attributes of the left side are super keys. The *id* attribute is a primary key, then it's a super key. The other attributes on the left side of the relations (*username*, *email*, etc) have the **UNIQUE** constraint, then they are also super keys.

The schema is already in the Normal Form of Boyce-Codd and does not need to be normalized.

3 SQL Code
